## EDUCATION

---

<b>PhD candidate in Human Movement Biomechanics</b> Research Institute for Sport and Exercise Science Liverpool John Moores University, United Kingdom	Jul 2023 – Present
<b>Master of Science in Sport and Clinical Biomechanics</b> School of Sport and Exercise Science Liverpool John Moores University, United Kingdom	Sep 2020 – Nov 2021
<b>Bachelor of Education in Human Movement Science</b> School of Exercise and Health Science Chengdu Sport University, China	Sep 2016 – Jun 2020

## SKILLS

---

**Languages:** Python, Matlab, Git, Shell, L<sup>A</sup>T<sub>E</sub>X  
**Computer Simulations:** OpenSim, Visual3D, Pyomeca, MyoSuite  
**Biomechanics Tools:** Optical Motion Capture, Inertial Measurement Units, Force Plates, Electromyography  
**High-Performance Computing:** Slurm, AWS, Dask  
**Machine Learning:** PyTorch, TensorFlow, Keras, Scikit-learn

## TECHNICALITIES

---

<b>Biomechanics Laboratory Technician</b> Liverpool John Moores University, Contracted United Kingdom	Sep 2025 – Present
<ul style="list-style-type: none"><li>Built up and fine-tuned 3 advanced biomechanics systems with the senior technician, provided professional training for staff and students. I am also responsible for managing them for both teaching and research activities.</li><li>System1: 10 Qualysis<sup>®</sup> Arqus motion capture cameras integrated with 8 Qualysis<sup>®</sup> Miquis cameras for marker-less motion capture, 2 Kistler<sup>®</sup> force plates, 16 Delsys<sup>®</sup> Trigno EMGs.</li><li>System2: 8 Qualysis<sup>®</sup> Arqus motion capture cameras integrated with a Treadmetrix<sup>®</sup> treadmill (AMTI<sup>®</sup> force plate embedded), 16 Delsys<sup>®</sup> Trigno EMGs and 8 Noraxon<sup>®</sup> EMGs.</li><li>System3: 14 Vicon<sup>®</sup> Vero motion capture cameras integrated with 16 Vicon<sup>®</sup> T-series cameras, 2 Kistler<sup>®</sup> force plates, 8 Vicon<sup>®</sup> Blue Trident IMUs and 16 Delsys<sup>®</sup> Trigno EMGs.</li></ul>	
<b>Machine Learning and Biomechanics Researcher</b> SportScientia Ltd., Contracted Remote	Jul 2023 – Present
<ul style="list-style-type: none"><li>Developed and validated deep learning neural network models to estimate ground reaction forces from instrumented insoles for various movement tasks.</li><li>Validated instrumented insoles with sensor fusion algorithm for measuring spatiotemporal gait parameters against optical motion capture and force plates for athletic performance and load monitoring applications.</li><li>Assisted in developing cloud computing pipelines with AWS to automate data processing and analysis for the instrumented insoles.</li></ul>	
<b>Graduate Research Assistant</b> Liverpool John Moores University, Contracted United Kingdom	Nov 2021 – Jul 2023
<ul style="list-style-type: none"><li>Assisted in commercial projects with New Balance Athletics, USA to test biomechanical interactions between soccer boots with different studs and artificial turfs using high-speed motion capture and force plates.</li><li>Assisted in commercial projects with New Balance Athletics, USA to test effects of different running shoes on lower limb biomechanics and muscle co-contractions during treadmill running using motion capture integrated with instrumented treadmill and EMGs.</li></ul>

## PROJECTS

---

### TechLayer | [GitHub \(Coming Soon\)](#)

- A Python project which trained and implemented a deep learning model to predict Ground Reaction Forces (GRFs) from IMU and pressure sensor data collected from instrumented insoles during various dynamic sports movements.
- The model is trained and validated on a dataset of 32 participants using High-Performance Computing (HPC) clusters and demonstrated high accuracy in predicting vertical and anterior-posterior GRFs against force plates.

### Wearable\_IK | [GitHub \(Coming Soon\)](#)

- A Python project integrating open-source sensor fusion algorithms and OpenSim API to estimate joint kinematics from IMU data and validating the results against optical motion capture data.
- It automates the entire workflow from data loading, preprocessing, sensor fusion, sensor-to-segment calibration, inverse kinematics, to results visualization
- It also features parallelized computing to speed up processing and a calibration-free approach for IMU sensors as it does not require magnetometers.

### Wearable\_System | [GitHub \(Under Development\)](#)

- A Python project integrating **TechLayer** and **Wearable\_IK** to generate muscle-driven simulations of human movement while solving optimal control problems from wearable sensor (instrumented insoles + IMUs) using OpenSim Moco. It also aims to validate the simulation results against traditional biomechanics measurement system using optical motion capture, force plates and EMGs.

### My\_Website | [GitHub](#)

- A project to build and deploy my personal academic website from an open-source TypeScript template for fun.

## TEACHING

---

### Graduate Teaching Assistant

Nov 2021 – Nov 2025

Liverpool John Moores University, Contracted  
United Kingdom

- Assisted in biomechanics lectures and practical laboratory sessions for optical motion capture cameras, force plates, IMUs and EMGs at undergraduate and master levels.
- Provided one-on-one tutorial support for students' projects and technical training of setting up and using the equipment for data collection of students' projects.

## SCHOLARSHIPS

---

**University-Industry Matched PhD Fund:** A three-year matched funding package awarded jointly by Liverpool John Moores University and industry partner to support collaborative PhD research. (Jul 2023)

**LJMU International Achievement Scholarship:** A scholarship awarded to international students with excellent academic performance to pursue postgraduate studies at Liverpool John Moores University. (Sep 2020)
