Education

PhD candidate in Human Movement Biomechanics Jul 2023 – Present
Research Institute for Sport and Exercise Science
Liverpool John Moores University, United Kingdom

Master of Science in Sport and Clinical Biomechanics Sep 2020 – Nov 2021
School of Sport and Exercise Science
Liverpool John Moores University, United Kingdom

Bachelor of Education in Human Movement Science Sep 2016 – Jun 2020
School of Exercise and Health Science
Chengdu Sport University, China

Skills

Programming Stacks: Python, Matlab, Git, GitHub, Shell, LaTeX
Machine Learning: PyTorch, TensorFlow, Keras, Scikit-learn
High-Performance Computing: Slurm, AWS, Dask
Biomechanics Tools: Optical Motion Capture, Inertial Measurement Units, Force Plates, Electromyography
Computer Simulations: OpenSim, Visual3D, MyoSuite

Technicalities

Machine Learning and Biomechanics Researcher Jul 2023 – Present
SportScientia Ltd., Remote
PhD-Industry Partnership

- Developed deep learning models to estimate ground reaction forces from wearable insoles instrumented with IMUs and pressure sensors during various human movements.
- Validated wearable insoles with sensor fusion algorithms for measuring spatiotemporal gait parameters against optical motion capture and force plates for athletic performance and load monitoring.
- Assisted in developing cloud computing infrastructures on AWS to deploy machine learning models and automate data processing and analysis for the wearable system.

Biomechanics Laboratory Technician Sep 2025 – Jan 2026
Liverpool John Moores University, UK
Contracted

- Built and fine-tuned 3 advanced biomechanics systems with the senior technician, provided professional training for staff and students. Also responsible for managing them for both teaching and research activities.
- System1: 10 Qualysis® Arqus motion capture cameras integrated with 8 Qualysis® Miqus cameras for marker-less motion capture, 2 Kistler® force plates, 16 Delsys® Trigno EMGs.
- System2: 8 Qualysis® Arqus motion capture cameras integrated with a Treadmetrix® treadmill (AMTI® force plate embedded), 16 Delsys® Trigno EMGs and 8 Noraxon® EMGs.
- System3: 14 Vicon® Vero motion capture cameras integrated with 16 Vicon® T-series cameras, 2 Kistler® force plates, 8 Vicon® Blue Trident IMUs and 16 Delsys® Trigno EMGs.

Graduate Research Assistant Nov 2021 – Jul 2023
Liverpool John Moores University, UK
Contracted

- Collaborated with New Balance Athletics, USA to test biomechanical interactions between soccer boots and artificial turfs with different studs configurations using high-speed motion capture and force plates.
- Collaborated with New Balance Athletics, USA to test effects of different running shoe configurations on running mechanics and muscle co-contractions during treadmill running using motion capture, instrumented treadmill and EMGs.

Projects

TechLayer | *GitHub (Coming Soon)*

- A Python project implemented a deep learning model to predict Ground Reaction Forces (GRFs) from IMU and pressure sensor data collected from instrumented insoles during various dynamic sports movements.
- The model is trained and validated on a dataset of 32 participants using High-Performance Computing (HPC) clusters and demonstrated high accuracy in predicting vertical and anterior-posterior GRFs against force plates.

Wearable_IK | *GitHub (Coming Soon)*

- A Python project integrating open-source sensor fusion algorithms and OpenSim API to estimate joint kinematics from IMU data and validating the results against optical motion capture data.
- It automates the entire workflow from data loading, preprocessing, sensor fusion, sensor-to-segment calibration, inverse kinematics, to results visualization
- It also features parallelized computing to speed up processing and a calibration-free approach for IMU sensors as it does not require magnetometers.

Wearable_System | *GitHub (Under Development)*

- A Python project integrating **TechLayer** and **Wearable_IK** to generate muscle-driven simulations of human movement while solving optimal control problems from wearable sensor (instrumented insoles + IMUs) using OpenSim Moco. It also aims to validate the simulation results against traditional biomechanics measurement system using optical motion capture, force plates and EMGs.

My_Website | *GitHub*

- A project to build and deploy my personal academic website from an open-source TypeScript template for fun.

Publications

Zhang, Z., Verhuel, J., Robinson, M., and Lake, M., Estimating ground reaction forces in dynamic sports movements using instrumented insoles and deep learning. Oral Presentation at XXX Congress of International Society of Biomechanics, p.85033, Stockholm, Sweden. 2025

Yang, C., Yang, Y., Xu, Y., **Zhang, Z.**, Lake, M., and Fu, W. Whole leg compression garments influence lower limb kinematics and associated muscle synergies during running. Frontiers in Bioengineering and Biotechnology, 12, 1310464. 2024

Zhang, Z. and Lake, M. Rate of knee flexion at the instant of landing during running can influence initial knee joint stiffness estimates due to running shoe cushioning. Oral Presentation at XXIX Congress of International Society of Biomechanics, p.314, Fukuoka, Japan. 2023

Zhang, Z. and Lake, M. A re-examination of the measurement of foot strike mechanics during running: the immediate effect of footwear midsole thickness. Frontiers in Sports and Active Living, 4, 824183. 2022

Zhang, Z. and Lake, M. A comparison of unmatched and matched filtering approaches for knee joint stiffness calculation during running. Oral Presentation at 40^{th} International Society of Biomechanics in Sports, Proceedings Archive, 40(1), 807, Liverpool, United Kingdom. 2022

Contributions

ISB Congress Session Moderator: Chaired the parallel session "Wearable Measurement Devices I" at the 30^{th} Congress of the International Society of Biomechanics (Stockholm, Sweden, 2025).

Teaching

Graduate Teaching Assistant Nov 2021 – Nov 2025

Liverpool John Moores University, Contracted

United Kingdom

- Assisted in biomechanics lectures and practical laboratory sessions for optical motion capture cameras, force plates, IMUs and EMGs at undergraduate and master levels.
- Provided one-on-one tutorial support for students' projects and technical training of setting up and using the equipment for data collection of students' projects.

Scholarships

University-Industry Matched PhD Fund: A three-year matched funding package awarded jointly by Liverpool John Moores University and industry partner to support collaborative PhD research. (Jul 2023)

LJMU International Achievement Scholarship: A scholarship awarded to international students with excellent academic performance to pursue postgraduate studies at Liverpool John Moores University. (Sep 2020)
