EDUCATION

PhD candidate in Human Movement Biomechanics Research Institute for Sport and Exercise Science Liverpool John Moores University, United Kingdom	Jul 2023 – Present
Master of Science in Sport and Clinical Biomechanics School of Sport and Exercise Science Liverpool John Moores University, United Kingdom	Sep 2020 – Nov 2021
Bachelor of Education in Human Movement Science School of Exercise and Health Science Chengdu Sport University, China	Sep 2016 – Jun 2020

SKILLS

Languages: Python, Matlab, Git, Shell, L^AT_EX

Computer Simulations: OpenSim, Visual3D, Pyomeca, MyoSuite

Biomechanics Tools: Optical Motion Capture, Inertial Measurement Unit, Force Plates, EMG

High-Performance Computing: Slurm, AWS, Dask

Machine Learning: PyTorch, TensorFlow, Keras, Scikit-learn

TECHNICALITIES

Biomechanics Laboratory Technician Liverpool John Moores University, Contracted United Kingdom	Sep 2025 – Present
<ul style="list-style-type: none">Built up and fine-tuned 3 advanced biomechanics systems with the senior technician, provided professional training for staff and students. I am also responsible for managing them for both teaching and research activities.System1: 10 Qualysis Arqus motion capture cameras integrated with 8 Qualysis Miquus cameras for marker-less motion capture, 2 Kistler force plates, 16 Delsys Trigno EMGs.System2: 8 Qualysis Arqus motion capture cameras integrated with a Treadmetrix treadmill (AMTI force plate embedded), 16 Delsys Trigno EMGs and 8 Noraxon EMGs.System3: 14 Vicon Vero motion capture cameras integrated with 16 Vicon T-series cameras, 2 Kistler force plates, 8 Vicon Blue Trident IMUs and 16 Delsys Trigno EMGs.	

Machine Learning and Biomechanics Researcher SportScientia Ltd., Contracted Remote	Jul 2023 – Present
---	--------------------

- Developed and validated deep learning neural network models to estimate ground reaction forces from instrumented insoles for various movement tasks.
- Validated instrumented insoles with sensor fusion algorithm for measuring spatiotemporal gait parameters against optical motion capture and force plates for athletic performance and load monitoring applications.
- Assisted in developing cloud computing pipelines with AWS to automate data processing and analysis for the instrumented insoles.

Graduate Research Assistant Liverpool John Moores University, Contracted United Kingdom	Nov 2021 – Jul 2023
--	---------------------

Assisted in commercial projects with New Balance Athletics, USA to test biomechanical interactions between soccer boots with different studs and artificial turfs using high-speed motion capture and force plates.

Assisted in commercial projects with New Balance Athletics, USA to test effects of different running shoes on lower limb biomechanics and muscle co-contractions during treadmill running using motion capture integrated with instrumented treadmill and EMGs.

PROJECTS

TechLayer | [GitHub](#)

- A Python project which trained and implemented a deep learning model to predict Ground Reaction Forces (GRFs) from IMU and pressure sensor data collected from instrumented insoles during various dynamic sports movements.
- The model is trained and validated on a dataset of 32 participants using High-Performance Computing (HPC) clusters and demonstrated high accuracy in predicting vertical and anterior-posterior GRFs against force plates.

Wearable_IK | [GitHub](#)

- A Python project integrating open-source sensor fusion algorithms and OpenSim API to estimate joint kinematics from IMU data and validating the results against optical motion capture data.
- It automates the entire workflow from data loading, preprocessing, sensor fusion, sensor-to-segment calibration, inverse kinematics, to results visualization
- It also features parallelized computing to speed up processing and a calibration-free approach for IMU sensors as it does not require magnetometers.

Wearable_System(Under Development) | [GitHub](#)

- A Python project integrating **TechLayer** and **Wearable_IK** to simulate neural-muscular dynamics from a complete set of wearable sensors (instrumented insoles + IMUs + EMGs) using optimal control framework in OpenSim.

My_Website | [GitHub](#)

- A personal academic website adapted from an open-source TypeScript template for fun.

TEACHING

Graduate Teaching Assistant

Nov 2021 – Nov 2025

Liverpool John Moores University, Contracted
United Kingdom

- Assisted in biomechanics lectures and practical laboratory sessions for optical motion capture cameras, force plates, IMUs and EMGs at undergraduate and master levels.
- Provided one-on-one tutorial support for students' projects and technical training of setting up and using the equipment for data collection of students' projects.
